

## High Input Voltage & Low Power CMOS Voltage Regulators

### ■ General Description

The LN75XX series is a set of three-terminal middle current low voltage regulator implemented in CMOS technology. They can deliver 150mA output current and allow an input voltage as high as 22V. They are available with several fixed output voltages ranging from 3.0V to 8.0V. CMOS technology ensures low voltage drop and low quiescent current. Although designed primarily as fixed voltage regulators, these devices can be used with external components to obtain variable voltages and currents.

### ■ Applications

- Battery-powered equipment
- Communication equipment
- Audio/Video equipment

### ■ Selection Table

| Part No. | Output Voltage | Tolerance | Package            |
